

PRESS RELEASE

POLISH FLYING SCHOOL PUTS ELITE S812 TO USE

Rapidly-expanding Polish flight training organisation Adriana SA is now using an Elite Evolution S812 FNPTII (Flight Navigation Procedures Trainer) at its headquarters at Waterowo Airfield.

The S812 has been built so that it is quickly convertible from a configuration representing the complex single-engine piper PA-28 Arrow IV to the twin-engine Piper PA-34 Seneca III.

Adriana is a fully certified professional training school that owns the airfield, which has 24/7 lighting availability. Adriana is currently seeking to have the airfield's status upgraded to that of airport, with the intention of further expanding operations there. Among facilities offered to its students are an on-site hotel.

The flying school offers training for the Private Pilot's and Commercial Pilot's licences and also for both the IF and IFR ratings. It flies two Cessna 150s and a Cessna 172 for training, the latter also being used for charter work, and also has an Antonov AN-2 used for pleasure flights for up to 11 people and for flying cargo. Adriana last year organised the 8th European AN-2 meeting at the airfield.

Elite, which is based at Dübendorf, Switzerland, has over the past 15 years built a reputation as the leading designer and manufacturer of PC-based flight training devices and offers them as complete training platforms. The company has sold to flying schools, aviation academies and airlines all over the world.
