

PRESS RELEASE

Dübendorf / Gloucester, May 28th, 2004 - Elite Simulation Solutions AG has installed an Elite Evolution S812 FNPT II at the premises of Aeros at Gloucestershire Airport during May. The STD (Synthetic Training Device) has been certified by the CAA only a few days after installation and is already fully operational and integrated in the flight training syllabus of the operator. The Elite Evolution S812 FNPT II system has been fully customised by Elite Simulation Solutions to replicate their Piper Seneca II aircraft complete with Apollo GPS, three-channel projected RealView visual system and a fully enclosed integrated instructor cabin.

“As part of our continued expansion a replacement simulator was essential and after careful evaluation by our Head of Training, Peter Hamlet, we chose Elite as the best product in its class. We were impressed by the quality of this Swiss product and the RealView visuals are stunning”. said Aeros Managing Director, Roger Poolman

Elite’s sales manager, René Huddlestone, said: “The sale of the ELITE evolution S812 FNPT II to Aeros marks the first sale of a Seneca II simulator for our company. The purchaser was looking for a partially type specific simulator and we accepted this challenge. This is another milestone on the road to successfully establishing ELITE as the leading provider of Synthetic Flight Training Devices (SFTD)”.

Aeros are a long-established Flight Training Organisation based primarily at Gloucestershire Airport just outside Cheltenham with a satellite base at Bristol Filton.

Aeros provides a full range of flight training from the PPL through to the CPL and Instrument Rating from modern, purpose built facilities staffed by professional Instructors equipped with a fleet of 20 Piper aircraft.
