

MEDIA RELEASE FOR ELITE SIMULATION SOLUTIONS AG

New AATD Piston Helicopter by ELITE[®] Colorado Bound

ORLANDO, FL. – February 27, 2015 – The very first FAA approved Model TH22 piston helicopter by ELITE Simulation Solutions was purchased by Colorado Heli-Ops, Broomfield, Colorado. According to the Owner/Operator, Mr. Dennis Pierce, “Our mission success as an industry best practices flight school is the guided results of the all inclusive application of modern SBT training programs, exceptional maintenance and the use of “state-of-the-art” simulation technology. We are pleased to welcome the ELITE TH22 to our fleet of simulation training devices. We chose the ELITE TH22 because of its accuracy, versatility and support services. It is fully instrumented with dual controls that provide the exact ergonomics, performance and aerodynamic fidelity we need for IFR and VFR training.” Colorado Heli-Ops uses simulation training devices beyond minimum pilot certificate requirements to develop industry desired pilot traits and skill sets.

According to Wayne Keyes, ELITE USA Director of Business Development “The fidelity of this helicopter flight training device gives benefits beyond the instrument, commercial, ATP and 7.5 hours VFR flying credits. The accuracy of this trainer allows procedural training for most VFR practical test standards, emergency procedures including brown-out operations and IIMC recoveries. The orientation and size of the visual display gives the correct spatial orientation for hover training, confined area landings, pinnacles, auto rotations and deceleration maneuvers.”

About Colorado Heli-Ops

Colorado Heli-Ops is located at Rocky Mountain Metropolitan Airport in Broomfield, Colorado. It is a professional flight training school for all helicopter pilot certificate levels specializing in high elevation mountain operations and Career Pilot Programs. Additional information about Colorado Heli-Ops is available at www.coloradoheliops.com.
