

## **PE Aviation selects ELITE evolution S712 FNPT I as new synthetic training device for CPL/IR training**

**Zurich, Switzerland, February 6th, 2003** - ELITE Simulation Solutions AG, a leading global developer and manufacturer of PC-based flight simulation systems, has scored a key success for its Elite Evolution S712 FNPT I (Flight and Navigation Procedures Trainer for single-engine aircraft) with a purchase of a system by PE Aviation, of Mönchengladbach, Germany.

The Elite Evolution S712 FNPT I system has been customised by the Zurich-based company to PE Aviation's specific requirements.

A prime benefit is that it is easily convertible to represent more than one aircraft, enabling the simulation of the Beech Bonanza A36 and the Piper Archer III.

It has a three-channel projected GenView visual system and a fully enclosed integrated instructor cabin, similar to a FNPT II certified system used for twin-engine aircraft.

"We were impressed by what ESS has to offer and by the idea of flexible and adaptable flight training devices to fully meet customer requirements" said PE Aviation's Managing Director, Bernhard Pschibil, who also pointed out the operational cost advantages PE Aviation will gain with the FNPT.

Dr Friedrich Jud, Chief Flying Instructor at PE Aviation, said: "In addition to the economic benefits we will be able to fully integrate this FNPT I into our training syllabus to achieve the utmost value for our student pilots."

Elite's Chief Executive, Gerhard Thamm, said: "We are honoured to have been selected by a highly respected training organisation such as PE Aviation and are confident that the S712 will play an integral role in PE Aviation's training syllabus."
