

## UK First for ELITE!

The first Elite FNPT simulator to be sold in the UK has been ordered by Exeter International Airport-based Flightpass so that students can use it for Instrument Rating work and Commercial Pilot's Licence courses.

The Elite Evolution S812 FNPT II (Flight and Navigation Procedures Trainer for twin engine aircraft) is being customised by the Swiss-based company to replicate both the twin-engine Piper PA-34 Seneca III and the single engine Piper PA-28R Arrow aircraft used by Flightpass for the CPL. It is planned to have the simulator installed and cleared for use by the CAA before the end of this year.

Andrew Gillett, Chief Executive Officer of Flightpass, which he set up last year, said: "What impressed us most about the Elite FNPT II were the visuals, which are really excellent, and the fact that the simulator 'flies' just like the real aircraft. If you fly it in or out of trim, the feedback you get through the controls is exactly as if you were flying the real thing.

"This puts it far in advance of older generation units. I'm very confident that this simulator will enhance the professional training courses at Flightpass, and will be enthusiastically received by our students.

"Elite's FNPT II is unique because it is an excellent quality product that easily satisfies the JAR requirements for CPL/IR training and is also realistically priced."

The Flightpass system will be complete with Apollo GPS and a three-channel projected RealView visual system. Conversion from representation of the PA-34 to the PA-28 is simple.

Elite Simulation Solutions AG is a leading developer and manufacturer of PC-based flight simulation systems.

The company's Sales and Marketing Manager, René Huddleston, said: "This is an important sale for us, marking our first FNPT sale into the United Kingdom. Flightpass has already gained high regard for the quality of its tuition through modern and well-structured training methods that are designed for rapid learning, and we are sure that the new system will further enhance this."

Flightpass offers the PPL(A), CPL/IR, aerobatics and Flight Instructor courses, Night and IMC Ratings and both CAA and FAA renewals.
